

Mariott - Momi Bay Resort

Fiji

“The Marriott Resort at Momi Bay is destined to become one of the brightest jewels in the crown of the Fijian Tourism Industry”

Frank Bainimarama - Prime Minister of Fiji

Bennett + Bennett were engaged by the client to provide a comprehensive detailed survey of the half constructed resort in Fiji. The resort had been under construction but the original owners went into liquidation in 2006 and subsequently new owners purchased the site.

The design team only had access to a small number of poorly documented records in relation to the original design. Bennett + Bennett were able to bring their experience in providing high quality and reliable survey data to thoroughly document the site.

An integrated approach utilising our Survey and Datapix B+B photogrammetry teams was applied to this comprehensive project with a tight time frame. Our team had a three day window to suitably establish control throughout the site and acquire spatial data throughout the structures and over the diverse terrain of the entire resort complex.

Deliverables included detailed survey control for future construction phases, a complete 3D model of the site, high resolution imagery, terrain models and 3D models of all existing structures.

Services Provided

Surveying & Photogrammetry (Datapix B+B):

- Full site detail survey & 3D model of all buildings

Completed

- 2013
